

6-EVF-80

(12V90Ah/10HR)

6EVF series battery is mainly used for power supply of electric tricycle, also for other DC power supply. The battery is mainly composed of positive plate, negative plate, separator, pole, battery case, vent plug and electrolyte. Each cell is connected through the partition welding. Each battery's voltage is 12V; the batteries of the same spec. are connected in series groups according to the prescribed amount. The battery is a good power battery, featuring large capacity, high energy ratio, good high current discharge performance, long service life, safety and reliability, maintainability.

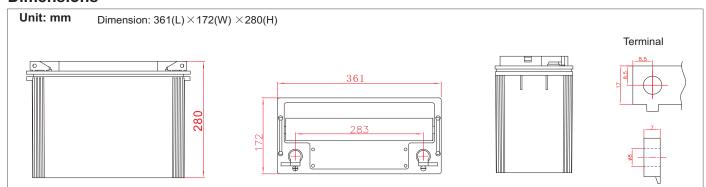

Specification

<u>opoomoution</u>	
Cells Per Unit	6
Voltage Per Unit	12
Capacity	80Ah@5hr-rate to 1.70V per cell @25°C 90Ah@10hr-rate to 1.80V per cell @25°C
Weight	Without Electrolyte 20.5 kg With Electrolyte 31.0 kg
Internal Resistance	Approx. 6.2 m Ω
Operating Temperature Range	Discharge: -40°C~60°C Charge: -20°C~50°C Storage: -40°C~60°C
Normal Operating Temperature Range	25℃±5℃
Float charging Voltage	13.6 to 13.8 VDC/unit Average at 25℃
Recommended Maximum Charging Current	16 A
Equalization and Cycle Service	15.3 to 15.9 VDC/unit Average at 25℃
Self Discharge	Self-discharge ratio less than 3% per month at 25°C. Please charge batteries before using.
Container Material	PP

Maintenance & Cautions

Cycle service

• • • • • • • • • • • • • • • • • • • •
Avoid battery over discharge, especially battery sereis connection use.
** Charged with recommend voltage, ensure battery can be full recharged.
In general, recharge capacity should be 1.2-1.3 times discharge capacity.
※ Effect of temperature on cycle charge voltage: -4mV/℃/Cell.
** There are a number of factors that will affect the length of cyclic service.
The most significant are depth of discharge, ambient temperature,
discharge rate, and the manner in which the battery is recharged.
Generally specking, the most important factors is depth of discharge.
